FOR IMMEDIATE RELEASE

### **AMC Engineers Receives 2007 IIDA Sectional & Regional Awards**

Anchorage, AK, July 31, 2007- AMC Engineers' lighting design for ConocoPhillips Alaska's 12<sup>th</sup> Floor Video Conference Room received a 2007 International Illumination Design Award of Merit at both the Sectional and Regional levels from the Illuminating Engineering Society of North America (IESNA). There are over 90 IESNA sections in the United States, Canada and Mexico organized into 10 larger geographical regions.

Several design constraints created a very challenging project including limited ceiling height, limited room size and current lighting standards that were prohibitively expensive. Using a new, recommended lighting practice specifically developed for video conference rooms as a guideline, AMC Engineers designed an innovative lighting system for ConocoPhillips Alaska that is cost-effective and easy for participants to use. One highlight includes controls integrated into the presentation equipment that allows

conference participants to use a simple computer touch screen to control lighting levels in the room while video conferences are underway.

AMC Engineers is an award-winning full service mechanical-electrical-security-control systems-telecommunication design engineering firm. Now in its 26<sup>th</sup> year, AMC provides top-quality, innovative design throughout Alaska.
