or
Advanced Certified
Construction Specifiers

Proficient with
AutoCAD and REVIT

LEED Accredited Professionals

Registered Communications
Distribution Designers

Certified Lighting Consultant

ASHRAE Certified
Building Commissioning
Professionals

Certified Healthcare
Constructors

Certified Pool Operator

AMC Engineers is committed to the design of well-engineered, energy efficient and sustainable mechanical, electrical and plumbing (MEP) systems tailored for new, remodel, or expansion projects.

We aim to meet our client's design goals while minimizing environmental impact throughout the life of the facility. AMC has a solid team of highly trained professional engineers and designers to help select the most appropriate MEP systems which are sustainable, energy efficient, and applicable for local operations and maintenance.

AMC firmly believes that an "Integrated Design" approach, which synthesizes unique project design considerations, will result in a project with reduced first cost, reduced operating cost and greatly improved end user satisfaction.

Our projects range from small feasibility studies to the complete mechanical and electrical design of projects exceeding 700,000 square feet. AMC has completed thousands of projects, which include:

- Educational and recreational facilities, public schools, and universities
- Hospitals, laboratories, medical, and day care facilities
- Museums, libraries, theaters, and auditoriums
- Airport terminals and airport support facilities
- Surface transportation projects
- Courthouses, correctional facilities, jails, and prisons
- Water and wastewater treatment and distribution facilities
- Military support facilities
