Safety and comfort is our ultimate focus

About Us AMC Engineers

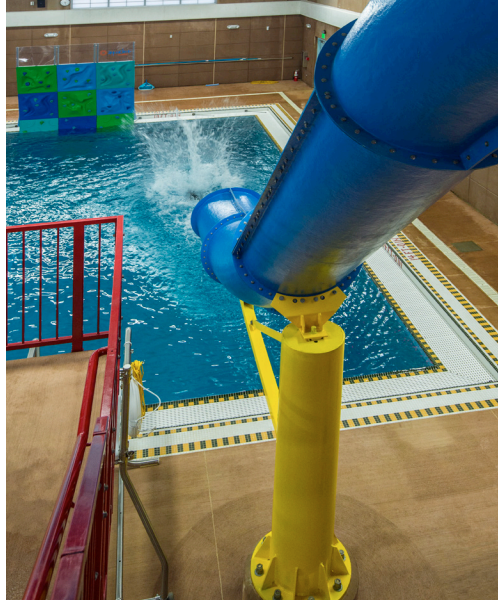

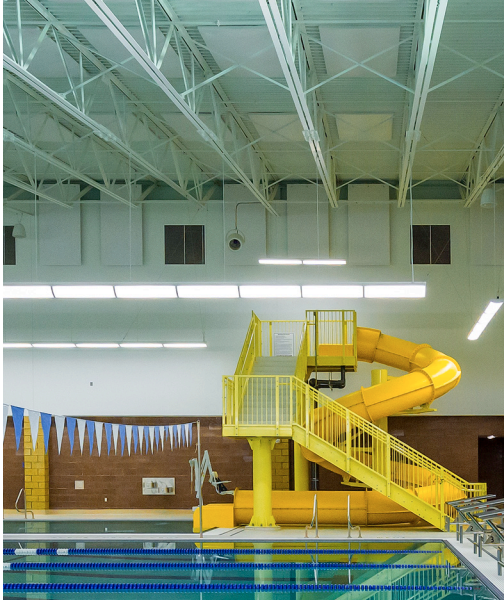

AMC Engineers is committed to the design of well-engineered, energy efficient and sustainable mechanical, electrical and plumbing (MEP) systems tailored for new, remodel or expansion projects.

We aim to meet our client's design goals while minimizing environmental impact throughout the life of the facility. AMC has a solid team of highly trained professional engineers and designers to help select the most appropriate MEP systems which are sustainable, energy efficient, and applicable for local operations and maintenance.

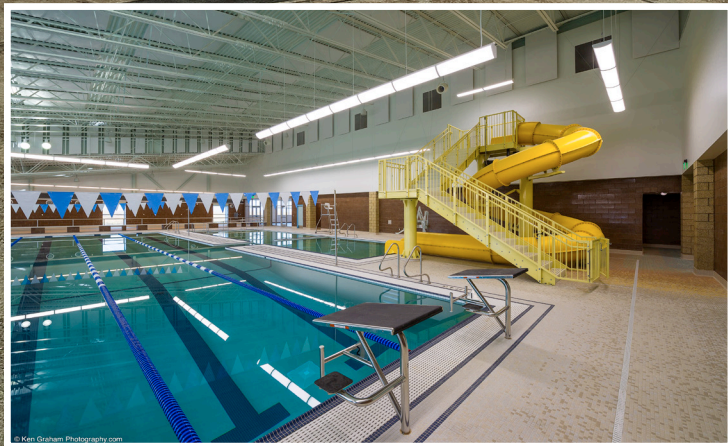

AMC's staff includes a certified pool operator with over 30 years of engineering experience. We understand the complex issues associated with ventilation systems for natatoria to control humidity and to reduce air-borne chloramines, the types of heating system required for pool and facility heat, the types of lighting fixtures that work in a pool environment, the electrical requirements for bonding and grounding the pools systems, energy conservation needs, and the swimming pool systems.

Recent Project Experience:

- Wasilla High School Pool Improvements
- Palmer High School Pool Improvements
- Mt Edgecumbe High School Aquatic Facility
- Ketchikan Aquatic Center
- Bethel Aquatic Training and Health Center
- Kodiak Competitive Swimming Pool
- Nikiski Pool Addition/Remodel
- ASD East High School Pool
- Kenai Central High School Pool Replacement
- Unalaska Swimming Pool Upgrade
- Unalaska Swimming Pool Renovation Study
- University of Alaska Anchorage Pool Study
